Follow-up

Assumed requester confirmation:
- Students can access LMS normally
- Assignment submission is working
- No further slowdown reported

Issue resolved for this training scenario.

D **Duonghb1577@gmail.com** 12:39 AM
Resolution Verification (simulated)

Requester was asked to verify LMS access and assignment submission.

Assumed result for training:
- Students can access LMS normally
- Assignment submission is working
- No further slowdown reported

D **Duonghb1577@gmail.com** 12:37 AM
Dev Team Update (training simulation)

Dev Team identified database connection pool saturation as the likely root cause.

Mitigation was applied by adjusting the database connection pool configuration.

Monitoring after the change:
- Response time returned to normal levels
- Timeout errors reduced
- No new submission failures observed

D **Duonghb1577@gmail.com** 12:32 AM
Customer Update

- Requester informed of investigation progress
- Dev Team escalation communicated
- Temporary workaround provided

D **Duonghb1577@gmail.com** 12:27 AM
Dev Team Escalation (training simulation)

Channel: Microsoft Teams

Message prepared for Dev Team:

@dev-team PRIORITY Performance Issue

Class: WEB101-HN-2024
Affected users: 15 students
Impact: Page load time 30+ seconds, class activity blocked
Ticket: #00007

Investigation findings:
- Response time increased from ~2s to ~35s
- Multiple timeout errors and slow queries
- Database connection pool near capacity
- Other classes appear normal

Request:
Please investigate the backend/database issue and provide mitigation.

Time-sensitive:
The class is currently in progress.

D **Duonghb1577@gmail.com** 12:24 AM

Decision

The issue will be escalated to the Dev Team.

Reason:
- 15 students are affected during an active class
- Database/backend degradation is suspected
- Fix may require configuration or code-level changes

Support team will continue updating the requester while Dev Team investigates.

D **Duonghb1577@gmail.com** 12:13 AM

Diagnosis (simulated)

Monitoring:
- LMS response time increased from ~2s to ~35s since 14:00
- Multiple timeout errors and slow queries detected
- Database connection pool is near capacity

Scope:
- Issue affects WEB101-HN-2024
- Other classes appear to be operating normally

Assessment:
Likely backend/database performance issue.
