Description

Issue:
12 students in class JS-ADV-HN-2412 cannot play the Lesson 3 video.

Symptoms:
- Video loads indefinitely
- Some users see "Cannot load media"
- Issue occurs on both web and mobile
- Some users still experience the issue after switching to 4G

Impact:
- 12 students affected
- Learning activity is blocked

Start time:
Approximately 19:40

Oct 31, 2026

Stage Changed
In Progress → **Solved** *(Stage)*

D **Duonghb1577@gmail.com** Oct 31, 2:14 AM
Branch C - Verification (simulation)

Sample user verification:
- User 1: Video plays normally after disabling adblock
- User 2: Video plays normally in Incognito mode

Additional checks:
- Video playback works on mobile
- No CDN / API errors detected
- No broader system impact observed

Assessment:
The issue is confirmed to be user-side.

D **Duonghb1577@gmail.com** Oct 31, 2:12 AM
Branch C - Decision

The issue will be handled as a user-side troubleshooting case.

Reason:
- The problem affects only a subset of users
- Incognito mode works normally
- The issue is not reproducible across all devices/networks
- No system-wide video playback failure is detected

Next actions:
- Provide browser/network troubleshooting steps
- Verify with 1-2 sample users
- Close only after user confirmation

D **Duonghb1577@gmail.com** Oct 31, 2:11 AM
Branch C - Diagnosis

Findings:
- Only a subset of users is affected
- Affected users share a similar browser / extension pattern
- Video playback works normally in Incognito mode
- Video works on mobile but fails on some desktop browsers

Assessment:
The issue is likely caused by a browser extension, adblock, cache, or local network configuration rather than the LMS/CDN itself.

D **Duonghb1577@gmail.com** Oct 31, 2:07 AM
Branch B - Verification (simulation)

- Video playback tested successfully on multiple lessons
- Web playback: Passed
- Mobile playback: Passed
- 2 sample users confirmed videos are working normally
- No new 502/504 spike observed during short-term monitoring

D **Duonghb1577@gmail.com** Oct 31, 2:07 AM
Branch B - DevOps Update (simulation)

DevOps findings:
- A CDN / API Gateway issue caused increased 502/504 errors
- The issue affected video delivery across multiple lessons
- Response time increased during the incident

Action taken:
- CDN / gateway service was restarted / recovered
- Traffic routing was stabilized
- Video endpoint health returned to normal

Current status:
- 502/504 error rate has dropped back to normal
- Response time has recovered
- Video playback is available again across affected lessons

D **Duonghb1577@gmail.com** Oct 31, 2:04 AM
Branch B - DevOps Escalation

Channel:
Microsoft Teams

Context:
- Multiple lessons and courses are affected
- Video endpoint error rate increased significantly
- Response time increased
- CDN / API Gateway shows a spike in 502/504 errors

Impact:
- 12 students currently affected in JS-ADV-HN-2412
- Broader impact across other lessons/courses is possible

Request:
Please investigate CDN / gateway / infrastructure health
and provide mitigation or recovery steps.

Communication:
Please provide status updates every 15-30 minutes.

Ticket:
#00010

D **Duonghb1577@gmail.com** Oct 31, 2:03 AM

Branch B - Diagnosis

Findings:
- Multiple lessons and courses are affected
- Video endpoint error rate increased significantly
- Response time increased
- CDN / API Gateway shows a spike in 502/504 errors

Assessment:
This is likely a system-wide CDN / infrastructure issue,
not a lesson-specific content issue or user-side problem.

DECISION
The issue will be escalated to DevOps / Infra.

Reason:
- Multiple lessons are affected
- 502/504 errors indicate a system / gateway / CDN problem
- The issue is beyond Support scope
- Broader user impact is possible

Next actions:
- Escalate to DevOps / Infra immediately
- Notify CXO / teachers if the impact expands
- Provide status updates every 15-30 minutes

D **Duonghb1577@gmail.com** Oct 31, 1:59 AM

Branch A - Verification

- Lesson 3 video playback tested successfully
- Web playback: Passed
- Mobile playback: Passed

No further 403/404 errors observed.

Assumed requester confirmation:
- Students can play Lesson 3 normally
- No further "Cannot load media" errors reported

Reinform requester for confirmation

D **Duonghb1577@gmail.com** Oct 31, 1:57 AM

Branch A - Dev/Content Ops Update (training simulation)

Root cause:
The video asset permission for Lesson 3 was misconfigured,
causing the API to return 403 errors.

Action taken:
- Corrected video asset permissions
- Refreshed the signed URL
- Verified the video asset is accessible again

Status:
Lesson 3 video is now available for playback.

D **Duonghb1577@gmail.com** Oct 31, 1:56 AM
Stage Changed

New → **In Progress** *(Stage)*

D **Duonghb1577@gmail.com** Oct 31, 1:52 AM
Branch A - Dev/Content Ops Escalation

Channel:
Microsoft Teams

Context:
- Lesson 3 only is affected
- Other lessons are working normally
- Video asset returns 403/404
- Multiple users across different networks are affected

Required data:
- lessonId
- videoAssetId
- incident timestamp
- 1-2 affected user samples

Request:
Please check the video asset permission / signed URL
and provide a fix or temporary replacement.

Workaround:
Use backup video if available or temporarily continue with another lesson.

D **Duonghb1577@gmail.com** Oct 31, 1:51 AM
Branch A

Findings:
- Only Lesson 3 affected
- 403/404 on video asset
- Other lessons normal

Decision:
Content/asset issue
→ Escalate to Dev/Content Ops

Oct 30, 2026
